

Dave Molsberry to Lead Florida Jet's Avionics Department Expansion

When Florida Jet Center President Terry Robertson decided to expand the company's avionics capabilities, he knew finding the right person to spearhead the project would not be easy. Florida Jet already has a long history of quality work and superior customer satisfaction, so Terry needed to find the person with the knowledge, work ethic and values to take his avionics department to the next level. Not one to do something unless he can do it right, Terry's search stretched for months then years. Finally in November 2007 a phone call came in from frigid Lincoln, Nebraska that changed everything. It was Dave Molsberry. He was cold, he wanted to move to South Florida and he wanted to work for Florida Jet.

Terry knew from past experience that Dave was perfect for the job. He had seen first hand Dave's talent as an avionics technician and his ability with people from the most telling perspective - the customer's. This is because in addition to Florida Jet Center's Part 145 repair station, Terry runs a Part 135 charter company, Florida Jet Service, that operates three Learjets, a Gulfstream and a helicopter. In the 1990's when Dave ran Duncan Avionics' satellite office at Fort Lauderdale Executive Airport, Dave was Terry's go-to guy for avionics.

"Frankly there wasn't an avionics shop in South Florida that could satisfy my demanding nature until Dave came along." Terry states candidly. "Dave Molsberry is an extremely talented and motivated individual. His realization of the importance of the customer is second to none. His customer service attitude is the best in the business, I guarantee it. You can call Dave at 6:00 a.m. on a Sunday morning with an AOG airplane and while most shops will say "no" Dave will not only say "yes", he'll say it with a smile. I can honestly say in the years I have known Dave - both as a customer and now his employer - I have never heard him complain."

As good as Dave's attitude is, it only compliments some of the most tenacious trouble shooting skills in the business. "It's not unusual to see Dave working well past the time when everyone else has gone home," says Terry. "He just won't give up until he solves the problem. I am excited about what he has brought to Florida Jet"

Florida Jet Center's avionics department currently specializes in Learjets, but plans for rapid expansion to include all types of corporate jets. They can handle everything from avionics repairs and modifications to complete installations. So next time you're fighting with that annoying pitch oscillation on your autopilot, maybe your plane is trying to tell you something - give Florida Jet and Dave Molsberry a try.

“
I am proud of all the people that work at Florida Jet, and now I have trusted my avionics capabilities with a person who I not only welcome aboard but truly am excited about what he has brought to this company.

~ Terry Robertson
